

Data sheet

Hand operated regulating valves

Types REG-SA and REG-SB

REG-SA and REG-SB are angleway and straightway hand operated regulating valves, which act as normal shut-off valves in closed position.

The valves are available in two different versions – REG-SA and REG-SB designed for regulation purposes in liquid and expansion lines.

The valves are designed to meet the strict quality requirements on refrigerating installations specified by the international classification societies and are carefully designed to present favourable flow conditions and accurate linear characteristics.

REG-SA and REG-SB are equipped with vented cap and internal backseating enables replacement of the spindle seal whilst the valve is active, i.e. under pressure.

Features

- Applicable to HCFC, HFC, R717 (Ammonia), R744 (CO₂), Propane, Butane, Iso-Butane and Ethane. R717 Heat Pump and Propylene applications with replaced O-ring.
- Modular Concept:
 - Each valve housing is available with several different connection types and sizes.
 - Possible to convert REG-SA or REG-SB to any other product in the Flexline™ SVL family (shut-off valve, check & stop valve, check valve or strainer) just by replacing the complete top part.
- Fast and easy valve overhaul service. It is easy to replace the top part and no welding is needed.
- Designed to ensure perfect regulation
- Internal backseating enables replacement of the spindle seal whilst the valve is active, i.e. under pressure.
- Easy to disassemble for inspection and possible repair.
- Long neck versions (DN 15 to DN 40) for insulated systems available from parts programme.
- Max. operating pressure: 52 bar g (754 psi g)
- Temperature range: –60/+150°C (–76/+302°F)
- Acts as a normal shut-off valve in closed position.
- Housing and bonnet material is low temperature steel according to requirements of the Pressure Equipment Directive and other international classification authorities.
- Exact capacity and setting of the valve can be calculated for all refrigerants by means of Coolselector®2 (Danfoss calculation and selection software).
- Classification: DNV, CRN, BV, EAC etc. To get an updated list of certification on the products please contact your local Danfoss Sales Company.

Design
Housing

Housing is Standard SVA angleway or straightway housing allowing other inserts from the SVL platform to be installed.
Material is special, cold resistant steel

Connections

Available with the following connections:

- Butt-weld ANSI (B 36.10 Schedule 80)
– DN 10 - 40 (3/8 - 1 1/2 in.)
- Butt-weld ANSI (B 36.10 Schedule 40)
– DN 50 - 65 (2 - 2 1/2 in.)
- Socket weld (ANSI B 16.11)
– DN 15 - 40 (1/2 - 1 1/2 in.)
- FPT inside pipe thread, NPT (ANSI/ASME B 1.20.1)
– DN 15 - 32 (1/2 - 1 1/4 in.)

The cone

The valves are available in two different versions – REG-SA with an A cone and REG-SB with a B cone. The A cone is designed for expansion lines, while the B cone is designed for regulating purposes e.g. liquid lines.

The valve cone is designed to ensure perfect regulation and provide an extensive regulating area. Irrespective of the refrigerant used, it is easy to obtain the correct capacity. A cone seal ring provides perfect sealing at a minimum closing momentum.

The valve cone can be turned on the spindle, thus there will be no friction between the cone and the seat when the valve is opened and closed.

Spindle

The spindle is made of polished stainless steel, which is ideal for O-ring sealing.

Packing gland - REG-SA and REG-SB

The “full temperature range” packing gland ensures perfect tightness in the whole range: –60/+150°C (–76/+302°F). The packing glands are equipped with a scraper ring to prevent penetration of dirt and ice.

Installation

Install the valve with the spindle up or in horizontal position. The flow must be directed towards the cone.

The valve is designed to withstand high internal pressure. However, the piping system in general should be designed to avoid liquid traps and reduce the risk of hydraulic pressure caused by thermal expansion.

For further information refer to product instruction for REG-SA and REG-SB.

Example of marking ring, REG-SA

Pressure Equipment Directive (PED)

REG valves are approved according to the European standard specified in the Pressure Equipment Directive and are CE marked.

REG-SA and REG-SB valves

- **Flow coefficients**
Flow coefficients for fully opened valves from $k_v = 0.15$ to 80 m³/h ($C_v = 0.17$ to 92.5 USgal/min).

Computation and selection

Introduction

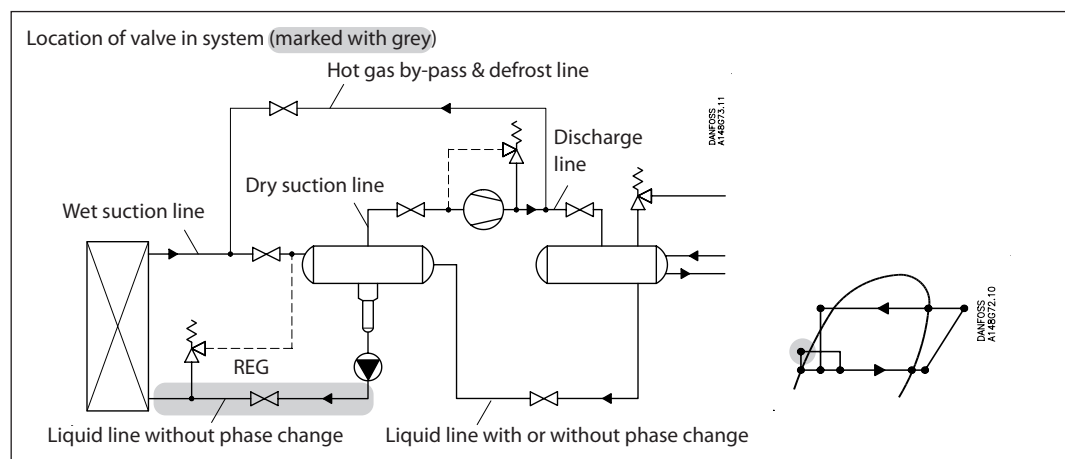

In refrigeration plants, hand operated regulating valves are primarily used in liquid lines in order to regulate the flow of refrigerant. The valves can, however, also be used as expansion valves. From a calculation point of view the two fields of application are very different.

Normal flow is the term used to describe the general case where the flow through the valve is proportional to the square root of the pressure drop across it and inversely proportional to the density of the refrigerant (Bernouillis equation).

This relationship between mass flow, pressure drop and density satisfies the majority of all valve applications with refrigerants and brines.

Normal flow is characterised by turbulent flow through the valve without any phase change. The following capacity curves are based on the above mentioned assumption.

Application of the hand operated regulating valves outside the normal flow area will reduce the capacity of the valve considerably. In such cases it is recommended to use Coolselector®2 (Danfoss calculation and selection software).

Sizing hand operated regulating valve for liquid flow

Liquid refrigerants: Use the liquid tables, fig. 6 - 10. For other refrigerants and brines, "Normal flow" (Turbulent flow); see below and use the flow coefficient tables (fig. 1 - 5).

SI-units

Mass flow:

$$k_v = \frac{G}{\sqrt{\rho \times 1000 \times \Delta p}} = G \times C_A \text{ [m}^3/\text{h]}$$

Volume flow:

$$k_v = \frac{\dot{V}}{\sqrt{\frac{1000 \times \Delta p}{\rho}}} \text{ [m}^3/\text{h]}$$

Imperial units

Mass flow:

$$C_v = \frac{0.95 \times G}{\sqrt{\rho \times \Delta p}} = 31.6 \times G \times C_A \text{ [USgal/min.]}$$

Volume flow:

$$C_v = \frac{0.127 \times \dot{V}}{\sqrt{\frac{\Delta p}{\rho}}} \text{ [USgal/min.]}$$

k_v	[m ³ /h]	Quantity [m ³ /h] of water flowing through a valve at a pressure loss of 1 bar (according to VDE/VDI Norm 2173).
P_1	[bar]	Pressure before the valve (upstream).
P_2	[bar]	Pressure after the valve (downstream).
Δp	[bar]	Actual pressure loss across the valve ($P_1 - P_2$).
G	[kg/h]	Mass flow through the valve.
\dot{V}	[m ³ /h]	Volume flow through the valve.
ρ	[kg/m ³]	Density of the refrigerant before the valve.
C_A		Calculation factor (fig. 11).

C_v	[US gal/min]	Quantity [US gal/min] of water flowing through a valve at a pressure loss of 1 psi.
P_1	[psi]	Pressure before the valve (upstream).
P_2	[psi]	Pressure after the valve (downstream).
Δp	[psi]	Actual pressure loss across the valve ($P_1 - P_2$).
G	[lb/min]	Mass flow through the valve.
\dot{V}	[US gal/min]	Volume flow through the valve.
ρ	[lb/ft ³]	Density of the refrigerant before the valve.
C_A		Calculation factor (fig. 11).

Computation and selection

Example 1.

Refrigerant: R 717
 Refrigerant flow: 2200 kg/h
 Pressure drop: $\Delta p = 0.5$ bar

The above mentioned example is illustrated on the following flow rate diagram and shows that REG-SB 15 and 20 with cone B can be used. The main rule is that nominal regulation range should be below 85% opening degree. If the arrowline is crossing 2 cone curves, the smaller cone should be selected if opening degree < 85%.

The example is only correct if the density of the refrigerant is approx. 670 (kg/m³), and there must be no build-up of flash gas in the valve.

Flow rate diagram

Data sheet | Hand operated regulating valves, types REG-SA and REG-SB

Computation and selection

Example 2.

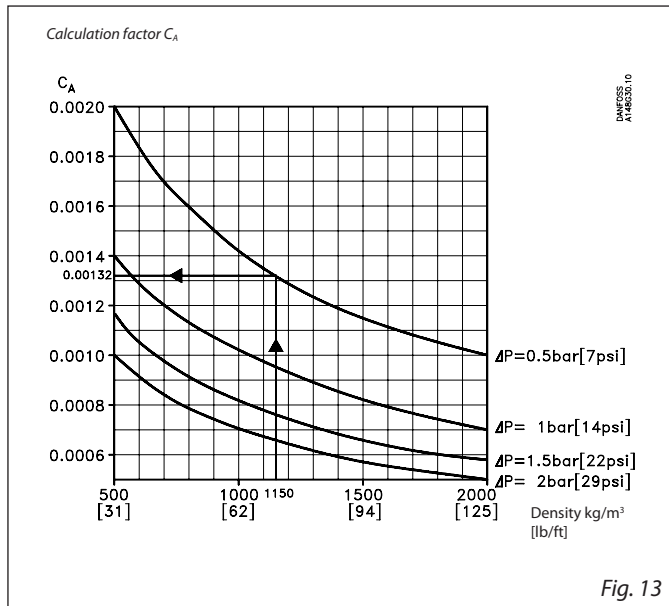

Brine, density ρ : 1150 [kg/m³]
 Brine flow G: 2,700 [kg/h]
 Pressure drop Δp : 0.5 [bar]

In this example it is not possible to use the selection diagrams (fig. 6 - 10) as the refrigerant in question is not included.

Use the curves of the k_v -values instead (fig. 1 - 5) and calculate the required k_v by means of the formulas in the "Introduction" passage at the beginning of this chapter. Alternatively calculate the k_v -values by means of the calculation factor C_A (fig. 13) and the flow rate diagram (in this example: fig. 14) as per the following calculation example.

Calculation example:

Required k_v -value
 $C_A = 0.00132$ (from fig. 18)
 $k_v = C_A \times G$
 $k_v = 0.00132 \times 2,700$ [kg/h]
 $= 3.56$ [m³/h]

Butt-weld ANSI (B 36.10 Schedule 40)

Size		Type	Code no.
mm	in.		

Angleway - REG-SB with cone type B

50	2	REG-SB 50 A ANG	148B5706
65	2 1/2	REG-SB 65 A ANG	148B5806

Butt-weld ANSI (B 36.10 Schedule 40)

Size		Type	Code no.
mm	in.		

Straightway - REG-SB with cone type B

50	2	REG-SB 50 A STR	148B5724
65	2 1/2	REG-SB 65 A STR	148B5809

Socket welding ANSI (B 16.11)

Size		Type	Code no.
mm	in.		

Angleway - REG-SB with cone type B

15	1/2	REG-SB 15 SOC ANG	148B5205
20	3/4	REG-SB 20 SOC ANG	148B5305
25	1	REG-SB 25 SOC ANG	148B5405
32	1 1/4	REG-SB 32 SOC ANG	148B5505
40	1 1/2	REG-SB 40 SOC ANG	148B5605
50	2	REG-SB 50 SOC ANG	148B5727

Socket welding ANSI (B 16.11)

Size		Type	Code no.
mm	in.		

Straightway - REG-SB with cone type B

15	1/2	REG-SB 15 SOC STR	148B5215
20	3/4	REG-SB 20 SOC STR	148B5315
25	1	REG-SB 25 SOC STR	148B5415
32	1 1/4	REG-SB 32 SOC STR	148B5515
40	1 1/2	REG-SB 40 SOC STR	148B5615
50	2	REG-SB 50 SOC STR	148B5725

FPT inside pipe thread, NPT (ANSI/ASME B 1.20.1)

Size		Type	Code no.
mm	in.		

Angleway - REG-SB with cone type B

15	1/2	REG-SB 15 FTP ANG	148B5207
20	3/4	REG-SB 20 FTP ANG	148B5307
25	1	REG-SB 25 FTP ANG	148B5407
32	1 1/4	REG-SB 32 FTP ANG	148B5507

FPT inside pipe thread, NPT (ANSI/ASME B 1.20.1)

Size		Type	Code no.
mm	in.		

Straightway - REG-SB with cone type B

15	1/2	REG-SB 15 FTP STR	148B5217
20	3/4	REG-SB 20 FTP STR	148B5317
25	1	REG-SB 25 FTP STR	148B5417
32	1 1/4	REG-SB 32 FTP STR	148B5517

A = Butt-weld ANSI
 SOC = Socket weld
 FPT = Inside pipe thread

ANG = Angleway
 STR = Straightway

Data sheet | Hand operated regulating valves, types REG-SA and REG-SB

Ordering REG-SA/SB from the parts programme

Example

(select from table 1 and 2)

Table 1
SVL valve housings w/different connections

Sizes [DN]		DN 10 mm ($\frac{3}{8}$ in.)				DN 15-65 mm ($\frac{1}{2}$ - 2½ in.)			
		ANSI-Butt weld		SOC		FPT			
mm	in.	ANG	STR	ANG	STR	ANG	STR	ANG	STR
10	$\frac{3}{8}$	148B5124	148B5125
